

CASE STUDY

# Casepoint Beats Relativity to Drive Major Antitrust Case

Shared access and shared cost meets multinational, multilingual case support.

## Client Profile

- A handful of Fortune 500 and Global 2,000 corporations represented by multiple plaintiff firms

## Case Profile

- **8TB** of data
- Over **15M documents**
- Unique elements: large antitrust litigation with multiple companies and global co-counsel; documents in Japanese, Chinese, and English

## Impact

- Over **15M documents** quickly culled to a **1.5M** set
- Facilitated collaboration among hundreds of attorneys
- Japanese language text extracted and indexed, and rapid machine translation provided
- Shared co-council costs and scalable resourcing with bi-coastal project management
- The case is ongoing

## Summary

See how Casepoint delivered industrial-strength eDiscovery to underpin a large price fixing class action case with multilingual documents and multiple global counsel.

## What was the business challenge?

To reduce 8TB of data composed of over 15 million documents to a reasonable size for hundreds of attorneys to review. Nine million of these documents were in Japanese. There was also a need to support co-counsel across multiple geographies and time zones with expert project management.

## How did Casepoint deliver?

Casepoint won the selection process hands down over Relativity and other major eDiscovery providers. A stellar reputation for strong project management was key, alongside a simple, predictable pricing structure and 100% cloud-based technology, which offers a powerful combination of built-in features:

- Big Data analytics and Early Case Assessment (ECA)
- Technology Assisted Review (TAR)
- Access from any device, on any browser, at any time

Casepoint can search through Japanese text as easily as it can English. It has supported 100 legal case workers who have been concurrently reviewing the matter over the last year.
