

CASE STUDY

Plaintiffs Firms Succeed with Casepoint

Summary

All trial attorneys face eDiscovery issues, but Plaintiffs lawyers deal with specific challenges: being inundated with multi-million-document defense productions, having the need for hundreds of users to access the data with customized privileges, and prolonged timelines -- all the while keeping costs at bay. Whether it's a mass tort multi-district litigation or class action suit, Casepoint's team and our web-based end-to-end eDiscovery platform meet these challenges. We are repeatedly chosen by Plaintiffs firms to support large, complex, multi-year, multidistrict litigation (MDL) from national price fixing cases to antitrust litigation.

Our Plaintiffs users cite the following as the most compelling reasons for their choice of Casepoint: pricing, "feature-rich" cloud-based eDiscovery platform that includes advanced analytics (active learning) tools, "hands-on project management," and an "intuitive interface."

High Volume Data Handling Within One Platform

Efficient and intelligent Casepoint capabilities, like CaseAssist Active Learning (i.e. TAR), successfully handle sophisticated batches of multiple terabytes that are often "dumped" on Plaintiffs firms. Integrated advanced analytics give counsel the resources necessary to increase signal on relevant content with high precision. That Casepoint's artificial intelligence suite is included and integrated within our end-to-end application not only saves Plaintiffs firms money, but is also important from a security perspective. The inherent risk in moving data between technologies is mitigated when everything you need is in a single, unified platform.

Multi-Counsel Privileges

Plaintiffs firms often join forces for efficiency. Casepoint understands while access to the entire data set is common, the need for independent and defensible work product is high. The creation of roles with highly customized privilege capabilities is easy to do in a self-service manner right within Casepoint. Flexible, permissions-based access can easily be distributed and managed. Additionally, custom coding panels are seamlessly deployed and can be managed independently or in sync across different profiles as needed.

Cost-Effectiveness

Casepoint's pricing is sensitive to the amount of data Plaintiffs firms need processed and/or preserved. Cost-effectiveness also translates to the number of users and the breadth of functionality in the platform. Casepoint's pricing includes unlimited users and includes all features (e.g. review, analytics, and artificial intelligence) turned on and available in the platform. Seasoned history of working with Plaintiffs firms means that we understand the way their business works and we have a specific pricing that appreciates their needs.

Resolving Plaintiffs' Pain Points

- Unlimited Multi-Counsel, role-based, privileges
- Scalable capacity
- Review, Advanced Analytics, and Artificial Intelligence (active learning) all-in-one
- Cost-effectiveness

Quote

“Casepoint's ability to support multiple counsels with multiple roles was critical to effectively using one platform to manage the needs of the entire Plaintiffs group.”

Stats

- 15M+ pages
- 160 simultaneous users logged onto Casepoint
- 3+ years and ongoing
- 30+ Co-Counsel
